

An all-in-one remote alcohol testing solution

A wireless breath alcohol testing
solution directly integrated
into the DIMS platform

REACT is an integral part of the **DIMS** Software Suite
DIMS is a better way of working together to **bring justice reform**

Remote Breathalyzer App

REACT provides a locked cell phone with a SIM card, a breathalyzer device, and the **integrated software** with case management and lab management to completely control and provide secure and randomized **on-demand testing**.

You could bridge the gap between testing and accountability

You could request testing on-the-go in the early mornings and late evenings

You could receive instant results along with photo verification

Imagine if . .

You didn't have to worry about internet dependency

You could geofence location for accurate results

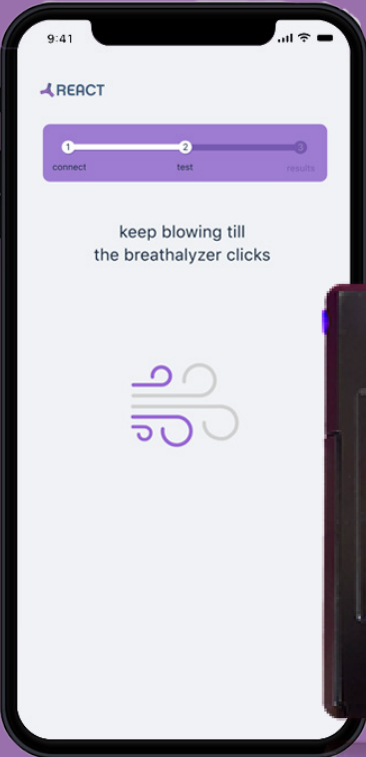

“

DIMS has done a great job creating and implementing our drug screening data and lab management systems. Their team has been quick to respond to any questions or changes we've asked for. They have done a great job taking our ideas and putting them into a working system.

— Jaci Urie, **Executive Director, Twin Falls County Treatment and Recovery Clinic**

”

Features

Scans your profile through QR Code to jump start check-in

Connects the phone to the breathalyzer via bluetooth

Seamlessly test alcohol levels by blowing into the breathalyzer

Receive instant results on your screen and your lab provider

99% accuracy in automated facial recognition

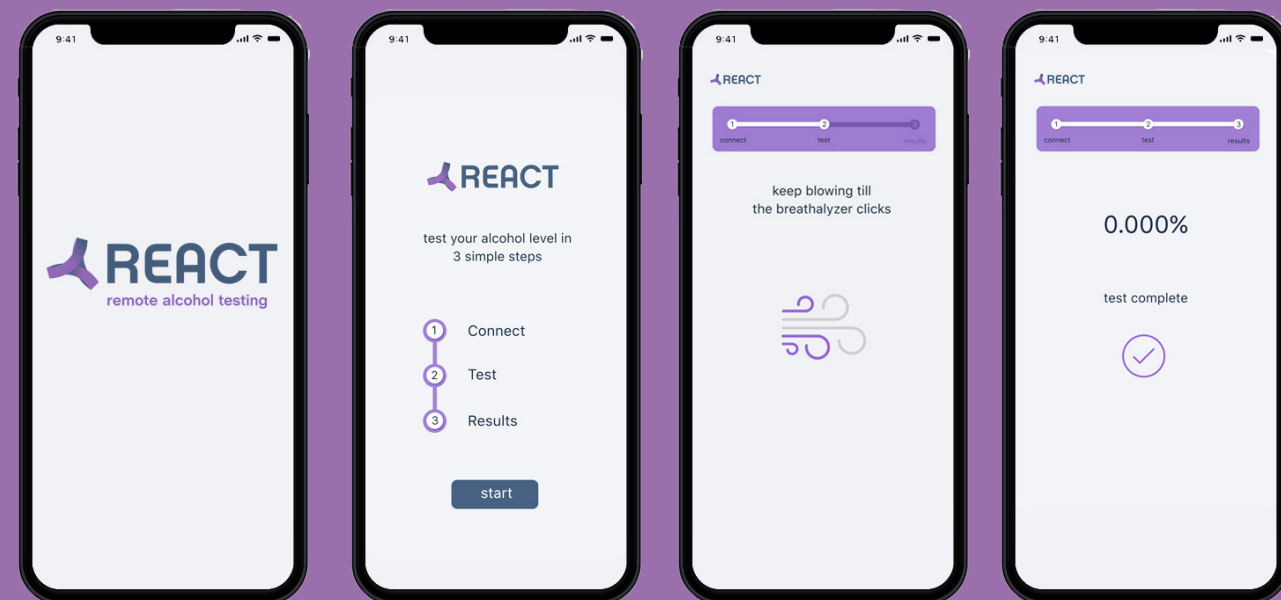

How it works

- 1 We provide each user with a smartphone and breathalyzer device.
- 2 Enter each user's personal information into the management portal.
- 3 Schedule automated testing intervals. You can also initiate on-demand, random tests so participants aren't always expecting a test.
- 4 Users are prompted to take a test via text and are then led to the application on their phone. The user then follows a set of simple instructions. Holding their mobile phone with the screen facing towards their face, they are prompted to blow into their breathalyzer.
- 5 Results are instant and sent along with audio and location.

Take your task management and alert system mobile so that you can create tasks, send notifications, and message **on-the-go**.

Once your participant receives their device, they can go from unboxing to receiving test results **in less than 24 hours**—it's that simple. Results are delivered to you instantly along with photo verification.

Completely secure and easy to use on-the-go. Available on iOS and Android

We believe that this technology should be accessible to **all justice professionals**, and we would be happy to partner with you and your team.
